Dirxctional

Clinic User Guide

Everything your team needs to send a referral and keep it moving.

V3.0 · SEPTEMBER 2026

CONTENTS

What's inside

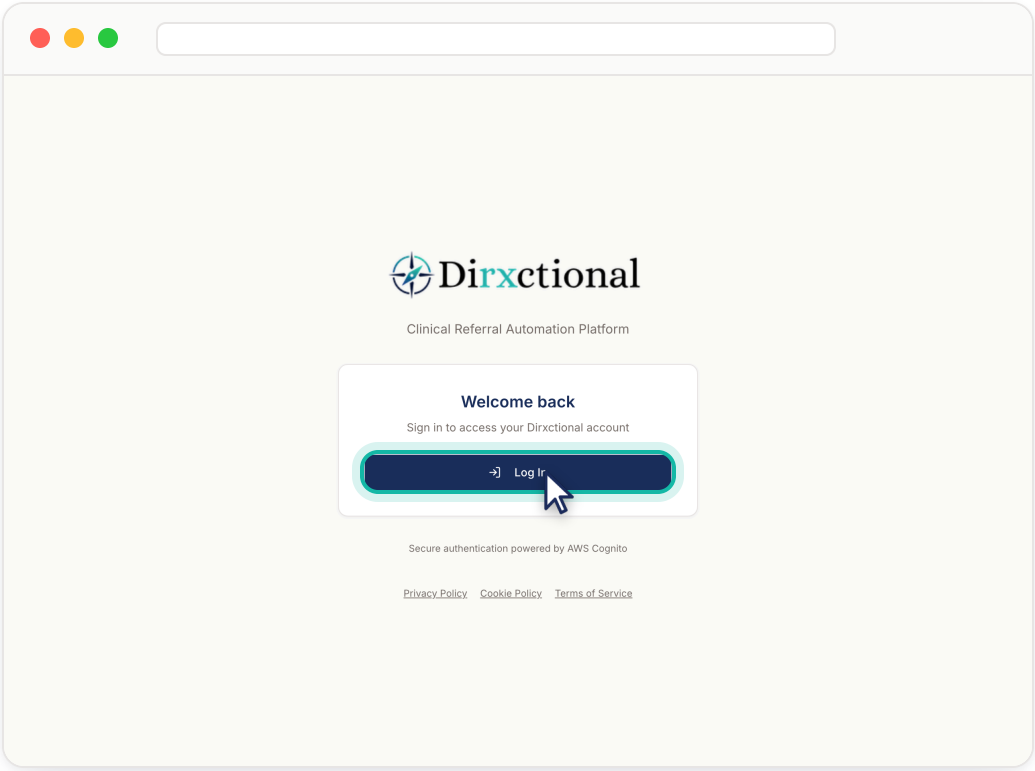

1	**Getting Started**	Logging in, your dashboard, your role
2	**Sending a Referral**	The four-step wizard
3	**When We Need Something From You**	Requests, fixes, notes
4	**Common Questions**	Patients, documents, pharmacy, settings
5	**Understanding Status**	Every badge, what it means
6	**Need Help**	Support and tutorials

SECTION 1

Getting Started

1.1 · Logging in

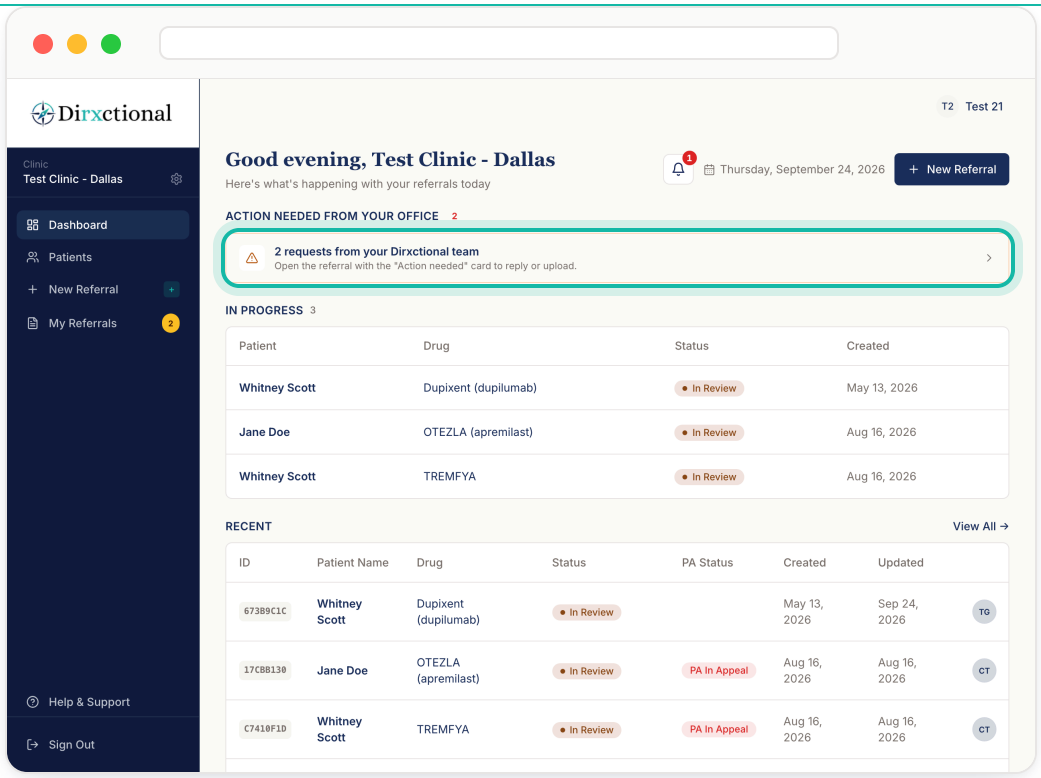

Go to **app.dirxctional.com** and click **Log In**. First time? You'll get an email invite. Click it, set your password, and set up two-step verification. No invite yet? Ask your office manager, or email **support@dirxctional.com**.

Sign in to reach your clinic workspace.

1.2 · Your dashboard

After logging in you land on your dashboard. Anything the Dirxctional team needs from your office shows up first, under **Action needed from your office**. Below it you'll see what's in progress, then your most recent referrals.

If something needs your office, it's the first thing you see.

> ✦ **Nothing under Action needed?** Then there's nothing for you to do. We'll email you when that changes.

1.3 · Your role and your emails

Everyone at your clinic has their own login and one office role. Anyone can submit referrals, answer requests and fix referrals. The role decides who gets which emails and who can change clinic settings.

Your clinic's shared inbox also gets every email that needs action, so nothing depends on one person. Our emails never include patient details. They carry a short referral number and a link that opens the referral after you sign in.

Office manager

Gets every email that needs your office's action. Can change clinic settings.

Front desk / MA

Gets emails about the referrals they submitted.

Provider

Gets emails about the referrals they submitted.

Billing / other

Can look things up. Gets emails about their own referrals only.

SECTION 2

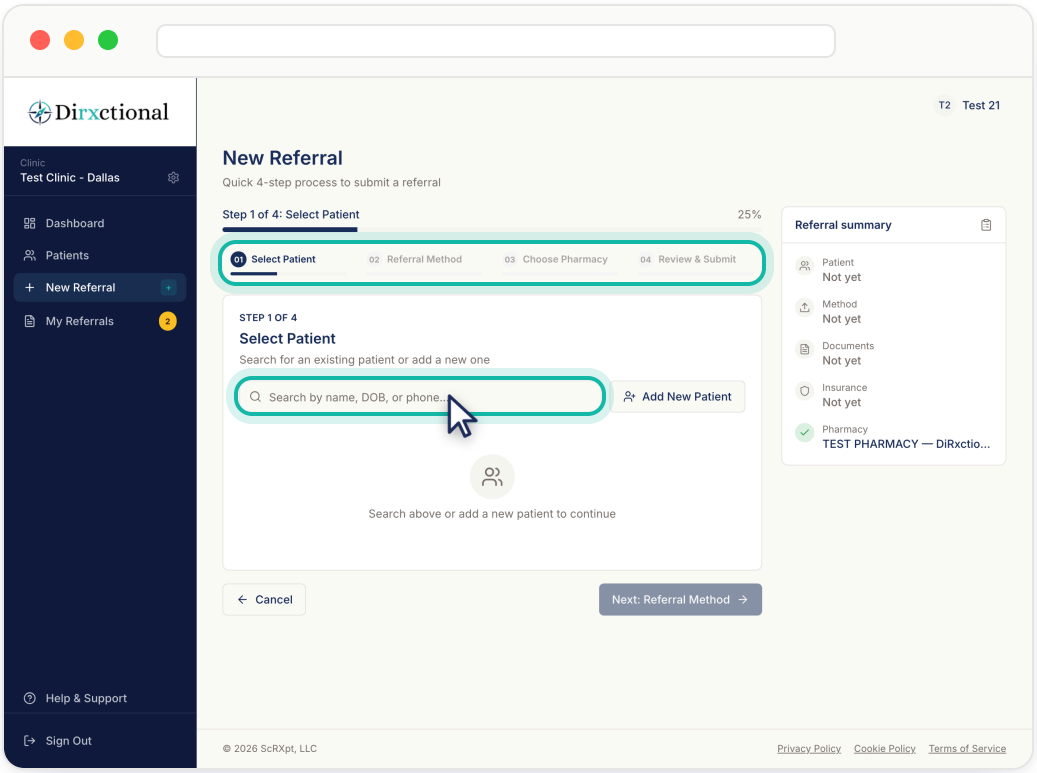

Sending a Referral

Every referral goes through one four-step wizard. Most take under five minutes.

In the sidebar, click **New Referral**. The summary on the right fills in as you go.

1 Select Patient

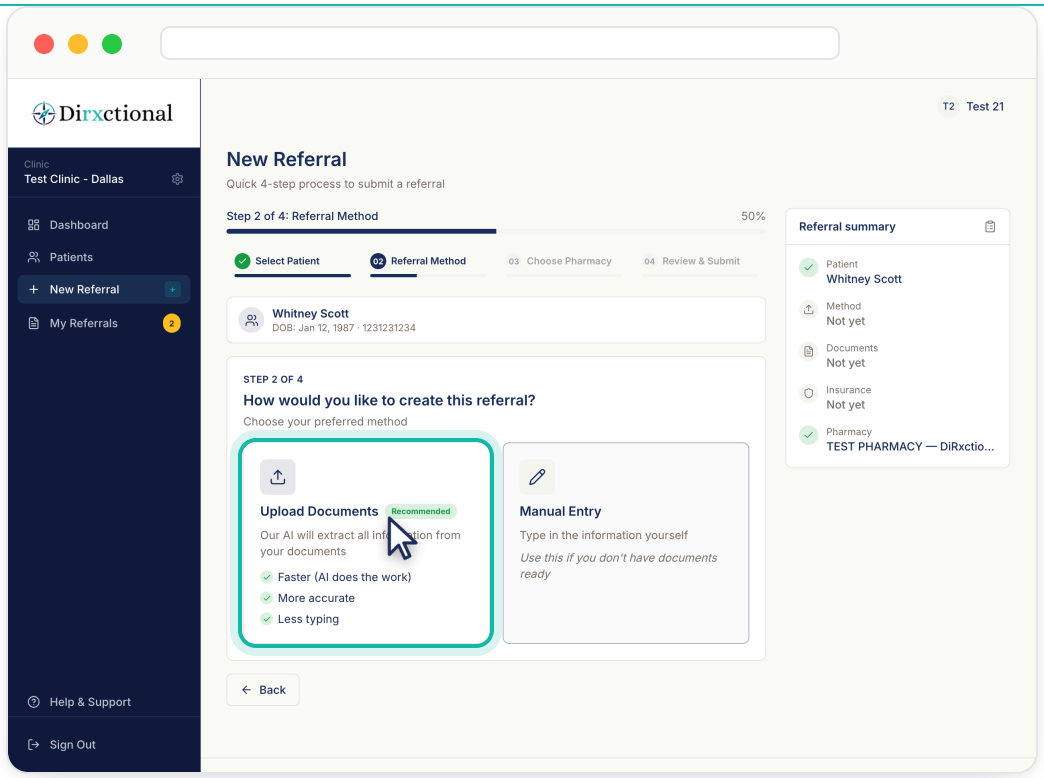

Search by name, date of birth or phone and click the patient. New patient? Click **Add New Patient** and add them without leaving the wizard.

Step 1 of 4: find the patient, or add one on the spot.

2 Referral Method

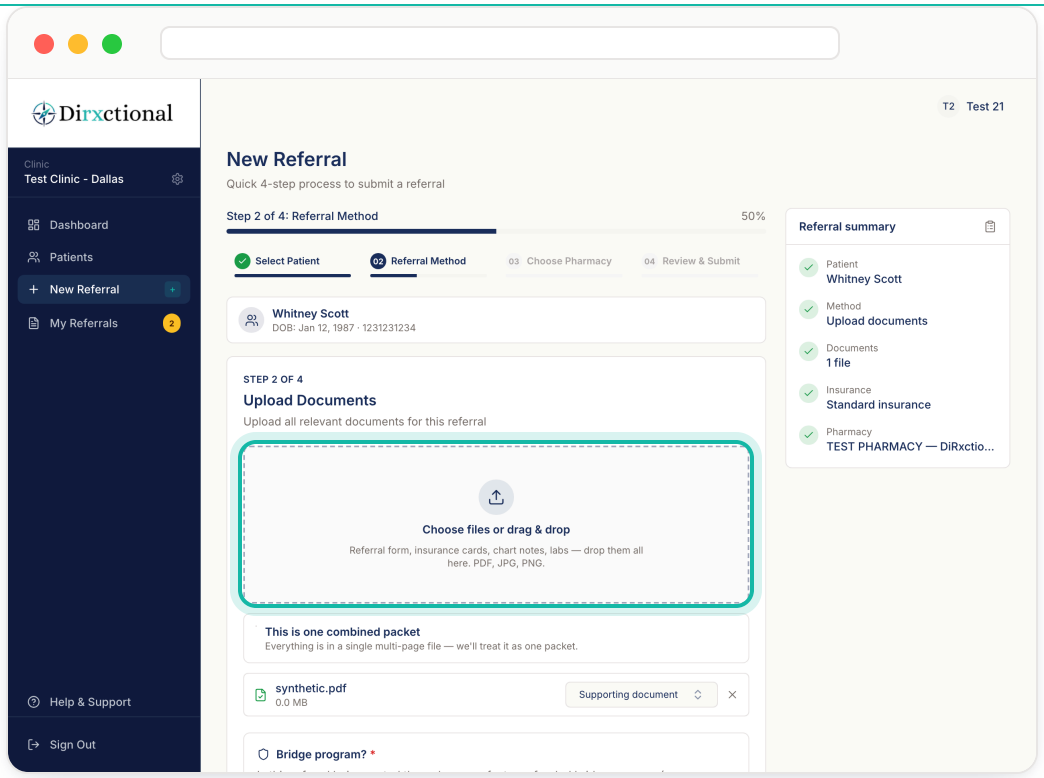

Choose **Upload Documents**, which is recommended, or **Manual Entry** if you'd rather type it in.

Upload is faster: our system reads the documents for you.

Drop in everything the provider gave you: referral form, insurance cards, chart notes, labs. If it's all one multi-page PDF, tick **This is one combined packet**. Then answer the **Bridge program?** question. It's required.

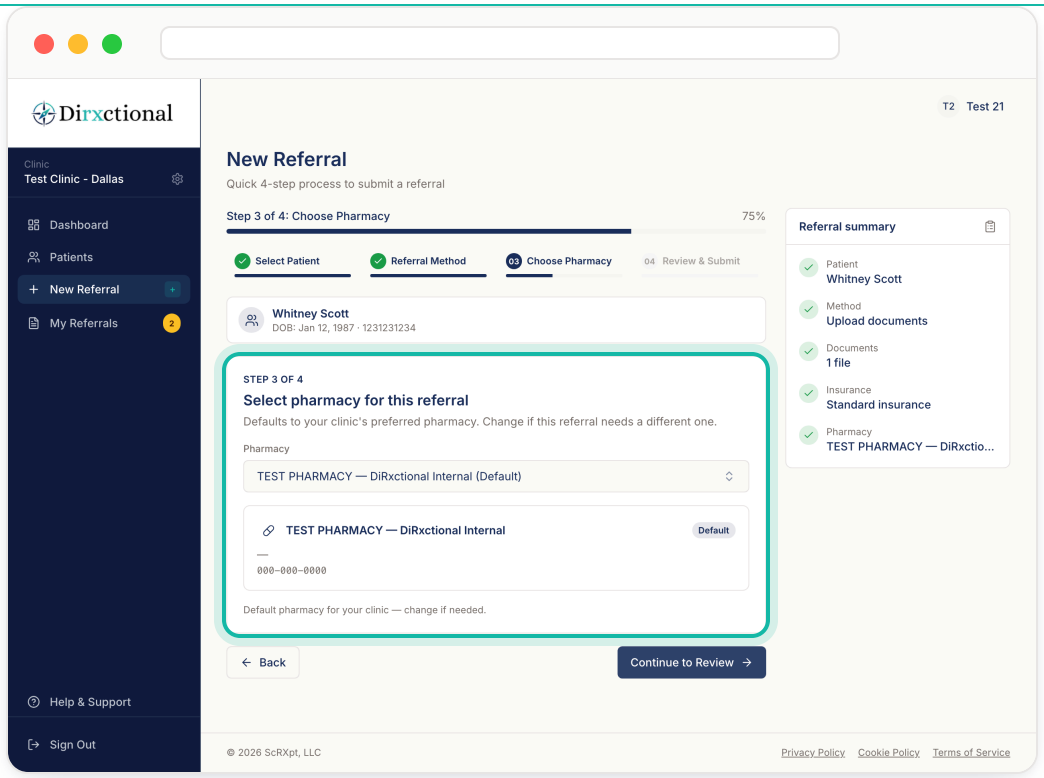

> ✦ **Upload anything.** You don't need to sort or rename files. Our system sorts and reads them.

Step 2 of 4: drop the files, then answer the bridge question below.

3 Choose Pharmacy

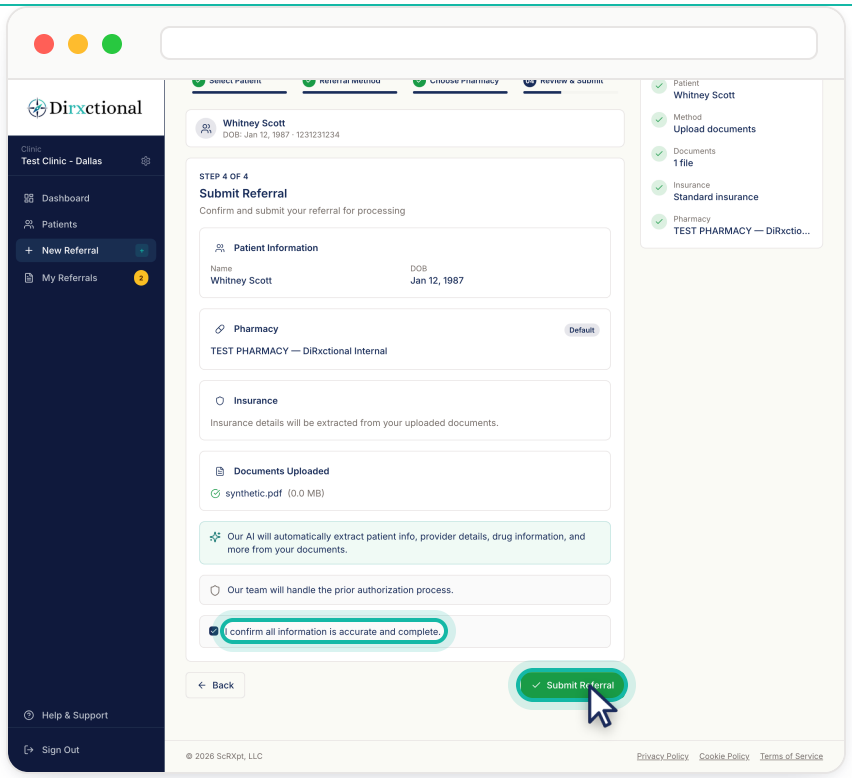

Your clinic's preferred specialty pharmacy is already selected. Change it only if this referral needs a different one, then click **Continue to Review**.

Step 3 of 4: your default pharmacy is pre-selected.

4 Review & Submit

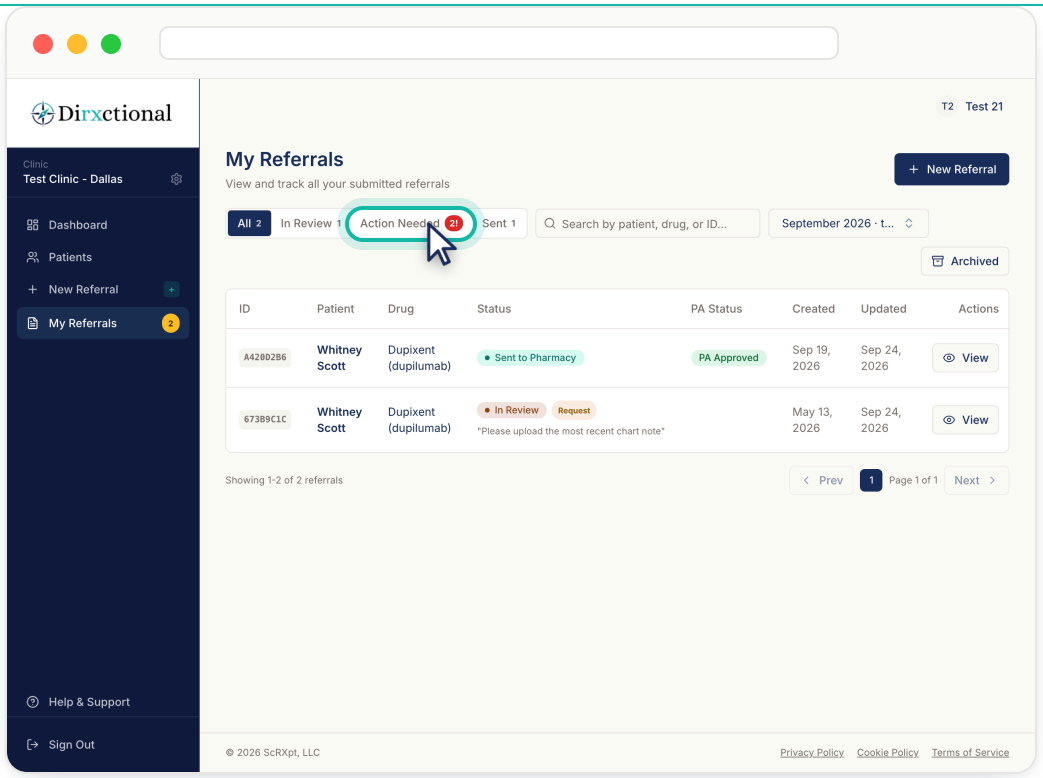

Check the patient, pharmacy and documents. Tick **I confirm all information is accurate and complete**, then click **Submit Referral**. Our team takes it from here, including the prior authorization.

Step 4 of 4: confirm, then submit.

After you submit: tracking progress

Every referral lives under **My Referrals**, with a status badge and a PA badge. Use the filters across the top to narrow the list. **Action Needed** always shows every referral waiting on your office, whatever month it's from. Section 5 explains each badge.

Action Needed collects everything waiting on your office.

SECTION 3

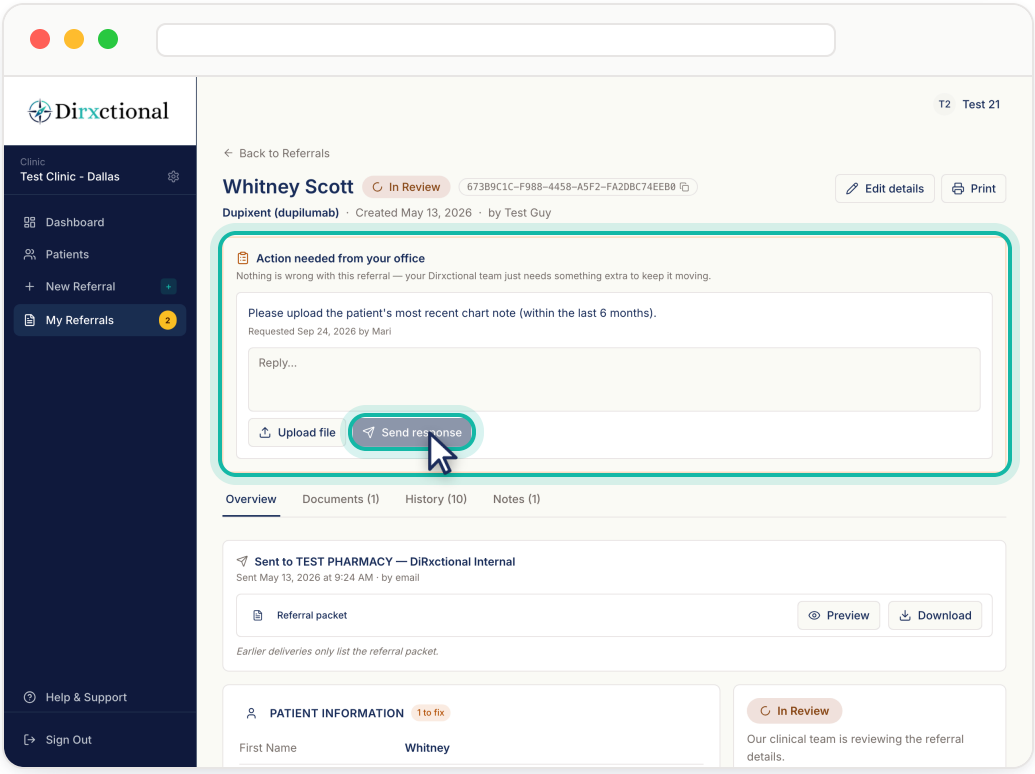

When We Need Something From You

There are two ways we ask your office for something. Both show on your dashboard and in the **Action Needed** filter, and both come with an email.

3.1 · A request from your Dirxctional team

Sometimes we need one more thing to keep a referral moving, like a recent chart note or a signed form. Nothing is wrong with the referral. It stays **In Review**.

Open the referral. The **Action needed from your office** card shows what we asked for. Type a reply, attach a file with **Upload file**, or both, then click **Send response**. The card turns green once every request is answered.

Answer right on the referral. No email back-and-forth.

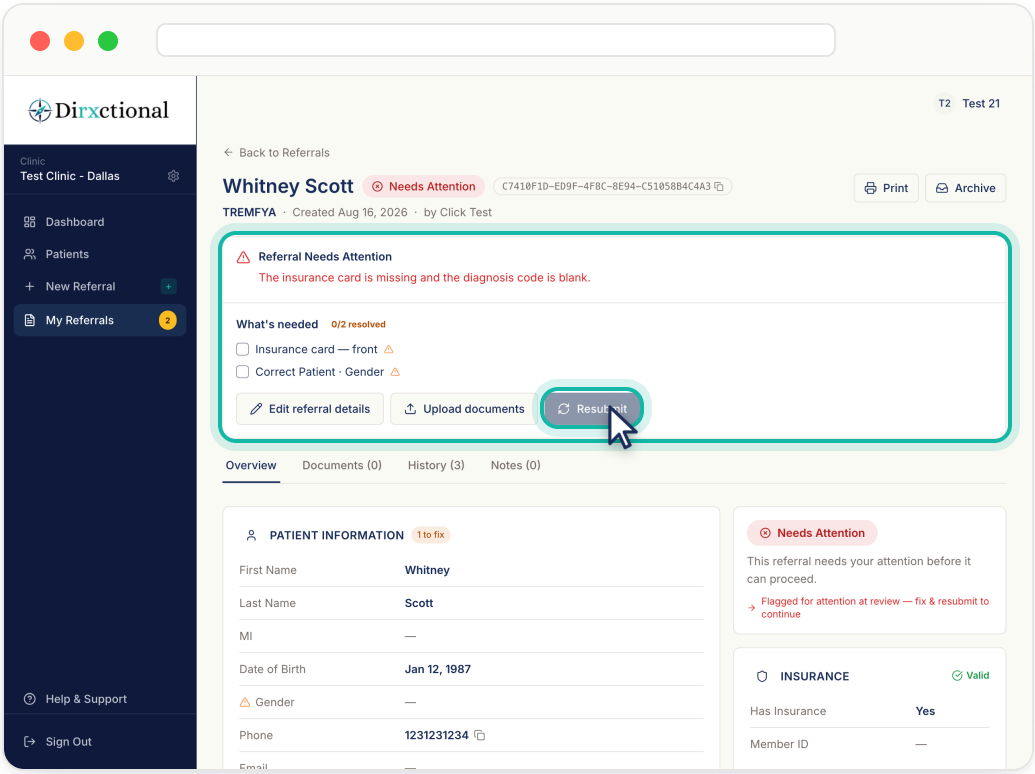

3.2 · A referral needs attention

If we can't move a referral forward as sent, its status changes to **Needs Attention**. Open it to see the reason and a **What's needed** checklist.

- Use **Edit referral details** to correct a flagged field.

- Use **Upload documents** to add what's missing.
- Items tick off as you fix them. When you're done, click **Resubmit**.

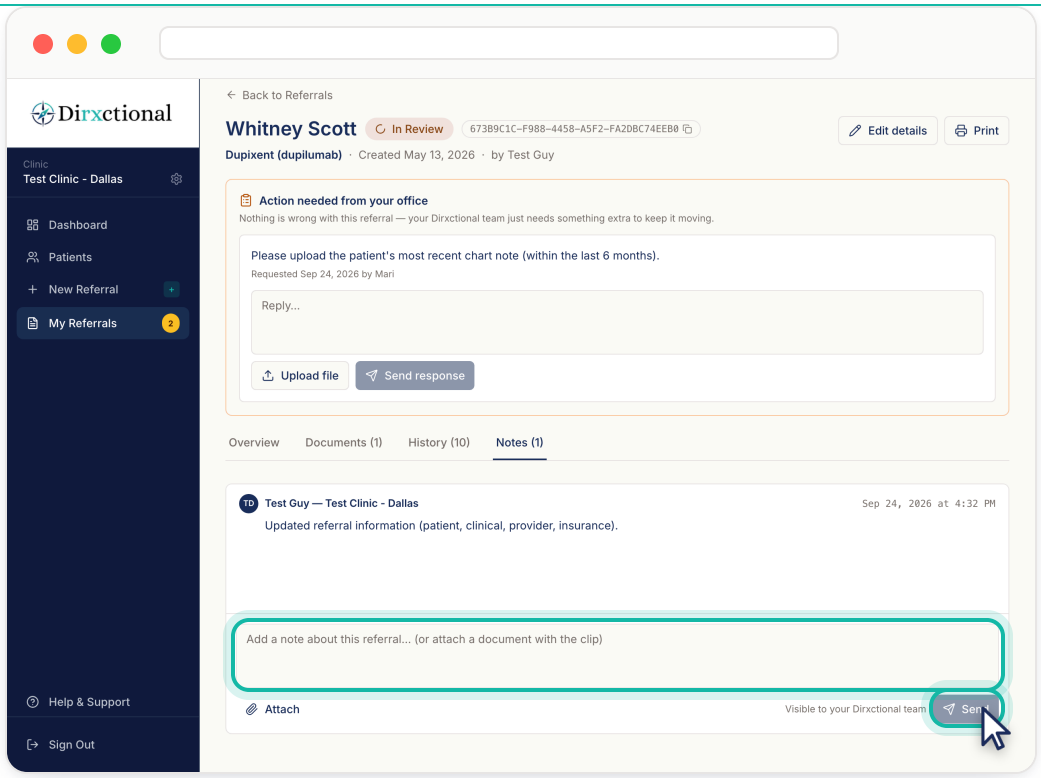

The referral goes straight back to our review queue and shows **In Review** again.

The reason and a checklist of exactly what to fix.

3.3 · Notes

For anything else about a referral, open it and go to the **Notes** tab. Type your message, attach a file if you need to, and click **Send**. Your office and our team see the same thread, so the whole conversation stays with the referral.

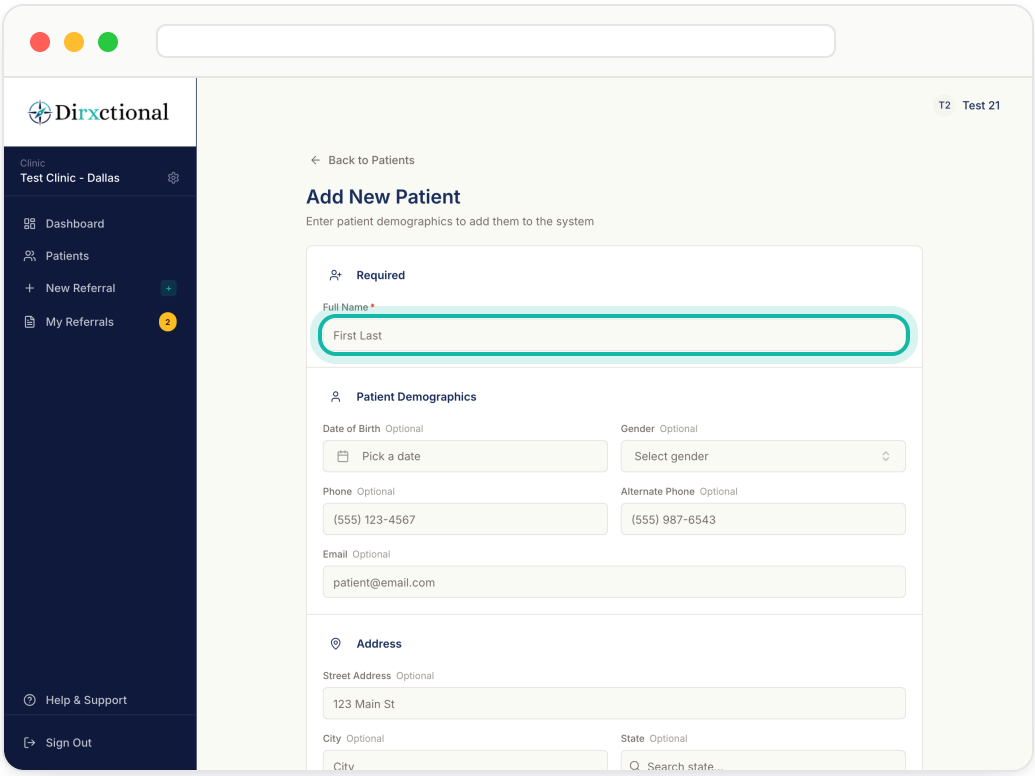

A shared thread between your clinic and our team.

SECTION 4

Common Questions

4.1 · Can I add a patient without starting a referral?

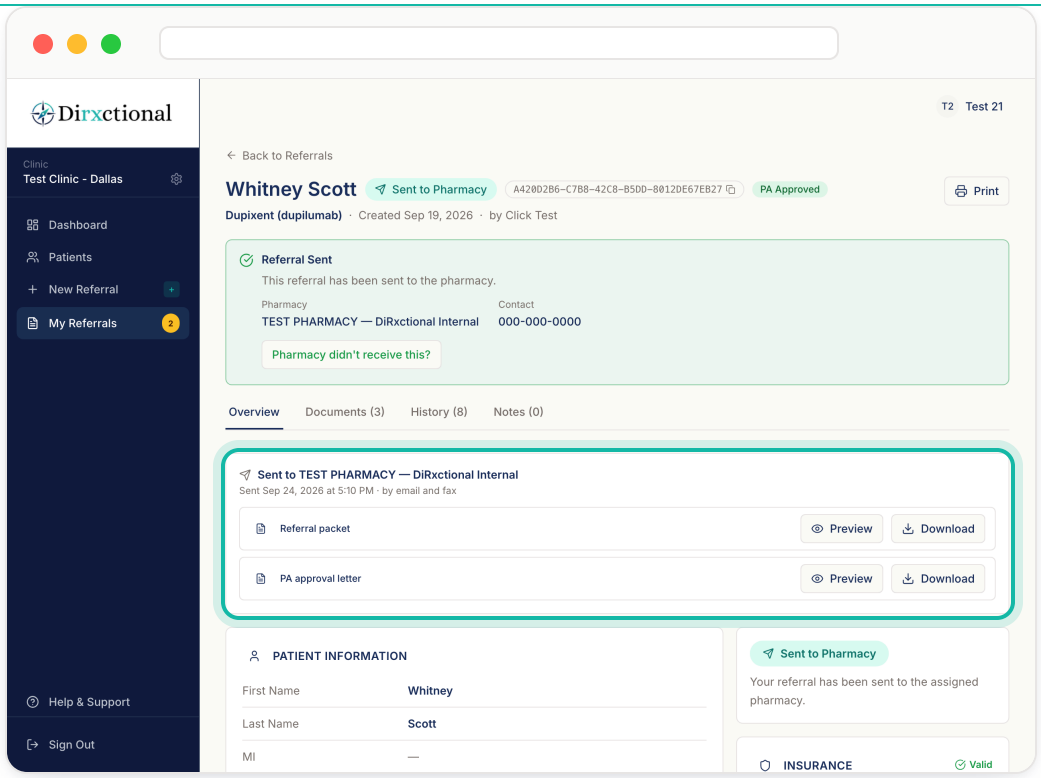

Yes. In the sidebar go to **Patients**, then **Add Patient**. Fill in the form and click **Create Patient**. Only the full name is required.

Full name is the only required field.

4.2 · How do I see what was sent to the pharmacy?

Open a referral that's been sent. The **Sent to** card on the Overview shows the pharmacy, when it went, whether it went by fax or email, and each file that was sent. Click **Preview** to look at a file or **Download** to save it.

Exactly what the pharmacy received.

4.3 · Where are all the documents for a referral?

Open the referral and go to the **Documents** tab. It lists every file on the referral, including anything our team added, with **Preview** and **Download** on each one.

4.4 · The pharmacy says they never got the referral.

Open the referral and click **Pharmacy didn't receive this?**. That opens a support request already linked to the referral. We'll check the delivery and resend it.

4.5 · How do I know if a prior authorization is needed?

Look at the PA badge on the referral and in My Referrals. You never submit PAs or appeals yourself. The Dirxctional team handles both, and if we need something from your office we'll send a request (see 3.1).

4.6 · The patient already has an approved PA. Do I still upload PA documents?

No. Send the referral form, chart notes and insurance card. If the existing PA is still valid, we'll use it.

4.7 · The patient is on a bridge program. Anything different?

Answer **Bridge program?** in step 2 of the wizard and pick the program. If there's more we should know, add a **Note** on the referral.

4.8 · How do we change our main email, fax or default pharmacy?

Click the gear next to your clinic's name at the top of the sidebar. Office managers can change these settings. Everyone else sees them read-only. If your clinic doesn't have an office manager yet, email us.

SECTION 5

Understanding Status

Every referral carries two badges: a **referral status** and, when a prior authorization is involved, a **PA status**. Here's what each one means and what, if anything, you need to do.

REFERRAL STATUS	WHAT IT MEANS	WHAT TO DO
Uploaded	The referral has been started.	Finish the wizard and submit.
Processing	Our system is reading your documents.	Wait a minute or two.
In Review	Our team is working on it, including any PA.	Nothing, unless a request shows up (3.1).
Approved	Ready to send to the pharmacy.	Nothing.
Sent to Pharmacy	The pharmacy has it.	The pharmacy will contact the patient.
Needs Attention	Something needs fixing before we can continue.	Open it, fix the checklist, resubmit (3.2).
Closed	We've stopped work after the payer's appeal decision.	Check the PA badge for why.

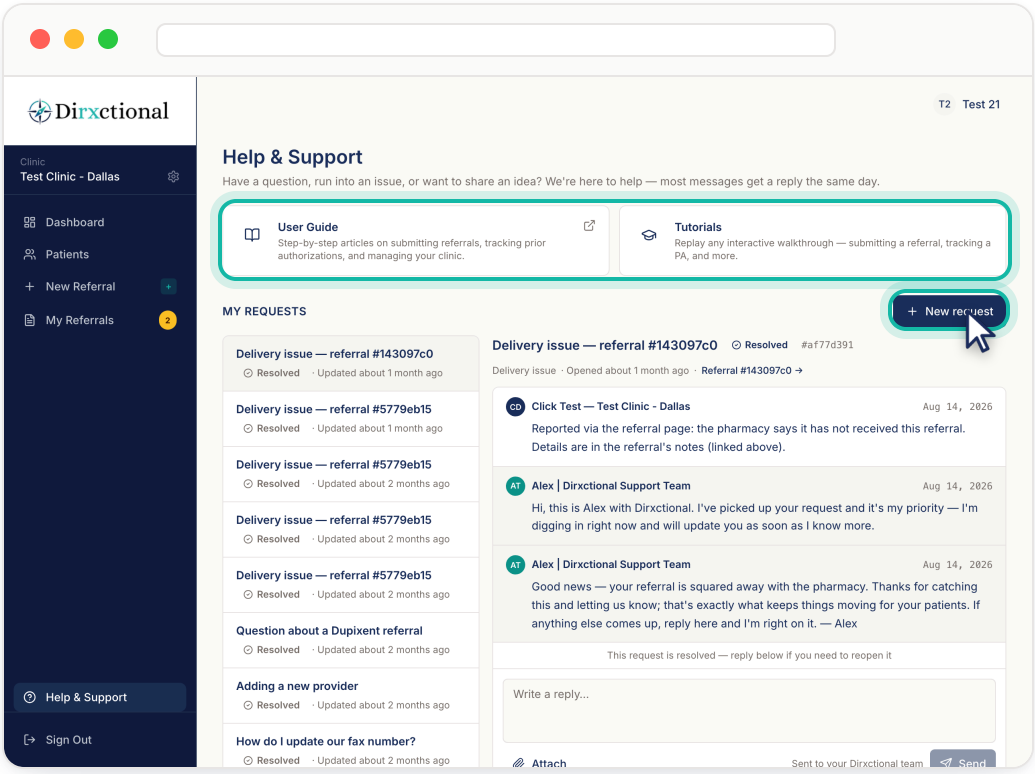

PA STATUS	WHAT IT MEANS
PA Pending	A PA is needed and hasn't been started yet.
PA In Progress	Our team is preparing it.
PA Submitted	Filed with the insurance payer. We're waiting on their decision.
PA Approved	Coverage approved.
PA Denied	The payer denied it. We'll decide on an appeal or other options and reach out if we need you.
PA In Appeal	We've appealed the denial and are waiting on the payer.
PA Level 2	The appeal moved to the next level, where the insurer works with your office directly.
PA Final	Appeals are exhausted. We'll let you know about bridge or manufacturer programs.

SECTION 6

Need Help

Click **Help & Support** at the bottom of the sidebar. From there you can:

- **New request:** ask us anything. Most messages get a reply the same day.
- **My requests:** see every conversation you've had with our team.
- **User Guide:** open this guide.
- **Tutorials:** replay any interactive walkthrough in the app.

Questions, the guide and walkthroughs in one place.

EMAIL SUPPORT

support@dirxctional.com

PLATFORM

app.dirxctional.com

✦ **Tip:** for anything about a specific referral, add a **Note** on that referral. The whole conversation stays attached to it, so nothing gets lost in email.
