SECTION 1

Getting Started

1.1 · Logging in

Go to **app.dirxctional.com** and log in. First time? You'll get an email invite — click it to set your password. No invite yet? Ask your office manager, or email **support@dirxctional.com**.

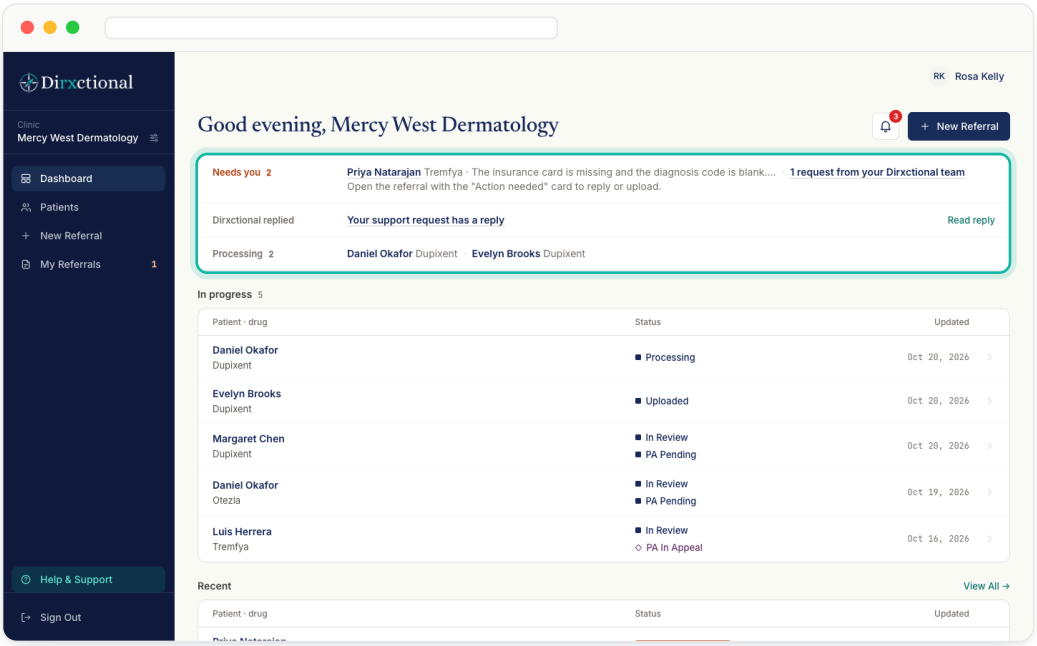

Sign in to reach your clinic workspace.

1.2 · Your dashboard

After logging in you land on your clinic dashboard — your home base. It greets you by clinic name ("Good morning, Mercy West Dermatology"), then shows one strip of what's happening today:

- **Needs you** — how many referrals need something from your office, and which ones.
- **Dirxctional replied** — our team has answered one of your support requests.
- **Processing** — referrals our team is working on right now.

Below the strip, **In progress** and **Recent** list your referrals by patient, drug, status and when each was last updated.

The dashboard leads with what needs you today.

> **First time here?** A short guided tour starts the first time you sign in: Welcome to Dirxctional → Dashboard → Patients → New Referral → My Referrals → your email notifications → Help. Replay it any time from **Help & Support → Tutorials**.

1.3 · Getting around

The sidebar on the left takes you everywhere. Your name, at the top right, opens **Edit Profile**.

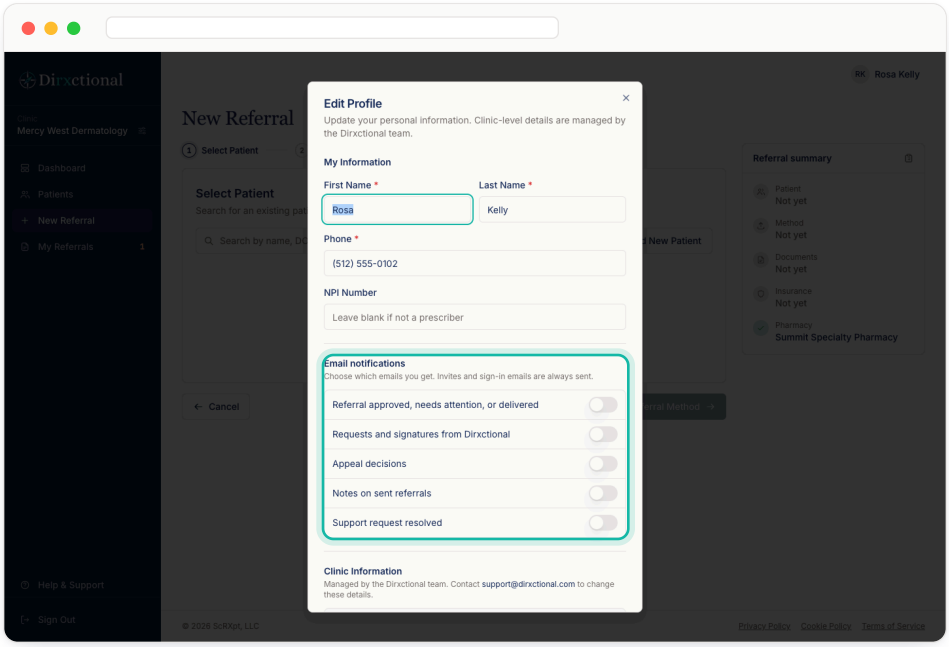

SIDEBAR	WHAT'S THERE
Dashboard	Today's strip and your referrals in progress.
Patients	Your patient list and each patient's record.
New Referral	The four-step referral wizard.
My Referrals	Every referral your clinic has sent, with its status.
Help & Support	This guide, tutorials, and your support requests.

1.4 · Which emails you get

Email notifications are **off by default**, and each person chooses their own. Click your name → **Edit Profile** → **Email notifications**, and turn on the ones you want:

- Referral approved, needs attention, or delivered
- Requests and signatures from Dirxctional
- Appeal decisions
- Notes on sent referrals
- Support request resolved

Invites and sign-in emails are always sent. Office managers can also turn on **Also send action-needed emails to the clinic's main inbox** in Clinic settings.

Edit Profile → Email notifications. Each switch stays off until you turn it on.

SECTION 2

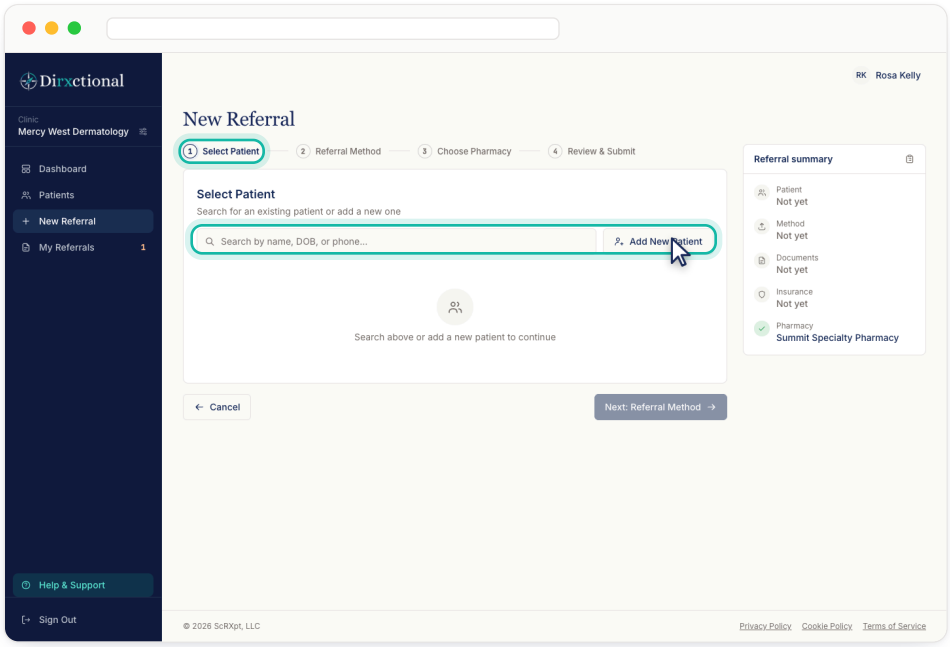

Sending a Referral

Every referral goes through one simple four-step wizard. Most take under five minutes.

In the sidebar, click **New Referral** to open the wizard, then move through the four steps below.

1 Select Patient

Search for an existing patient by name, DOB, or phone — or add a new one right inside the wizard.

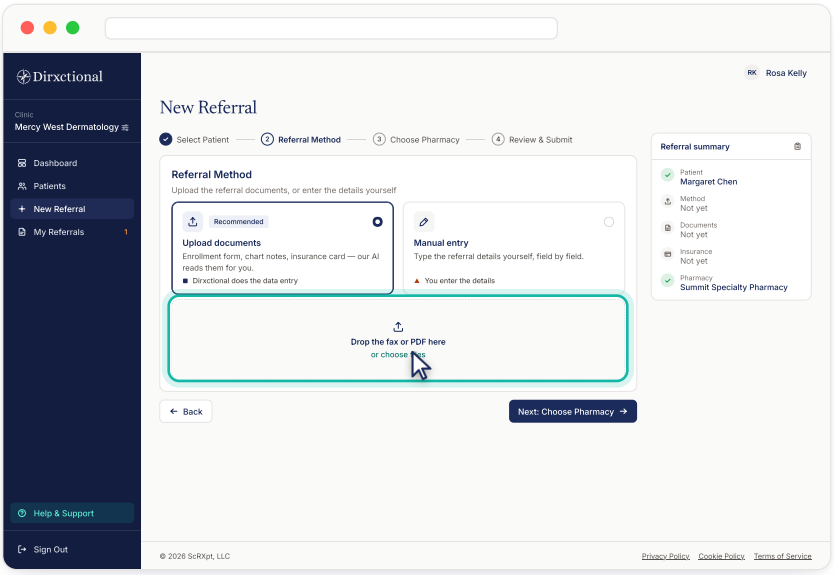

Step 1 of 4 — find the patient, or add one on the spot.

2 Referral Method

Drag your files into the upload box — the AI reads them automatically (enrollment form, chart notes, insurance card). Don't worry about sorting; upload whatever the provider gave you. Prefer to type it in? Switch to **Manual entry**.

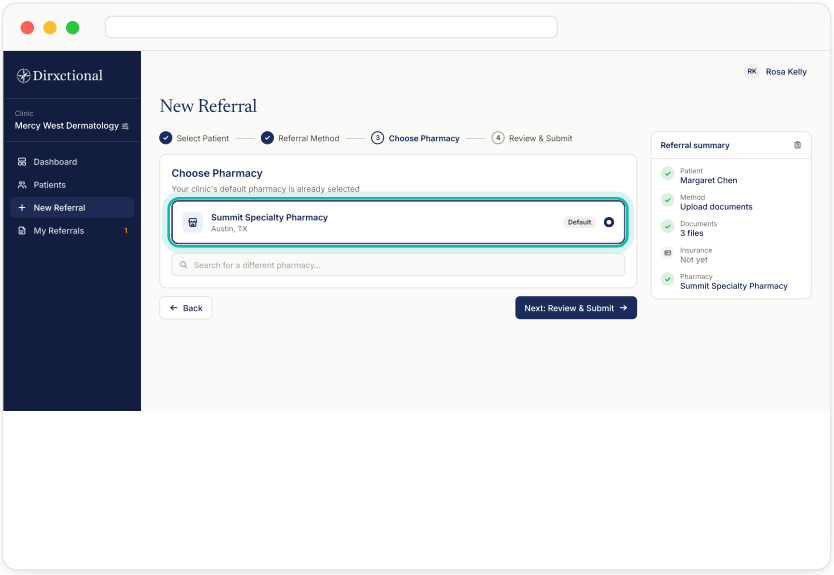

> **Upload anything** — our system sorts and reads it for you.

Step 2 of 4 – the smart dropzone accepts any document.

3 Choose Pharmacy

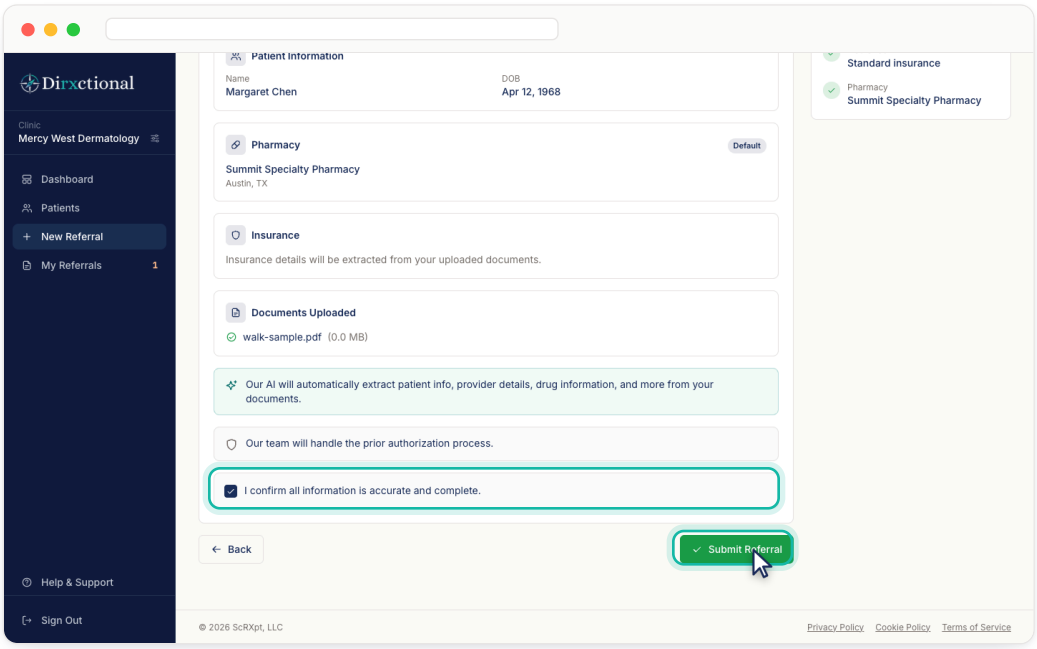

The wizard defaults to your clinic's preferred specialty pharmacy. Change it only if this referral needs a different one.

Step 3 of 4 – your default pharmacy is pre-selected.

4 Review & Submit

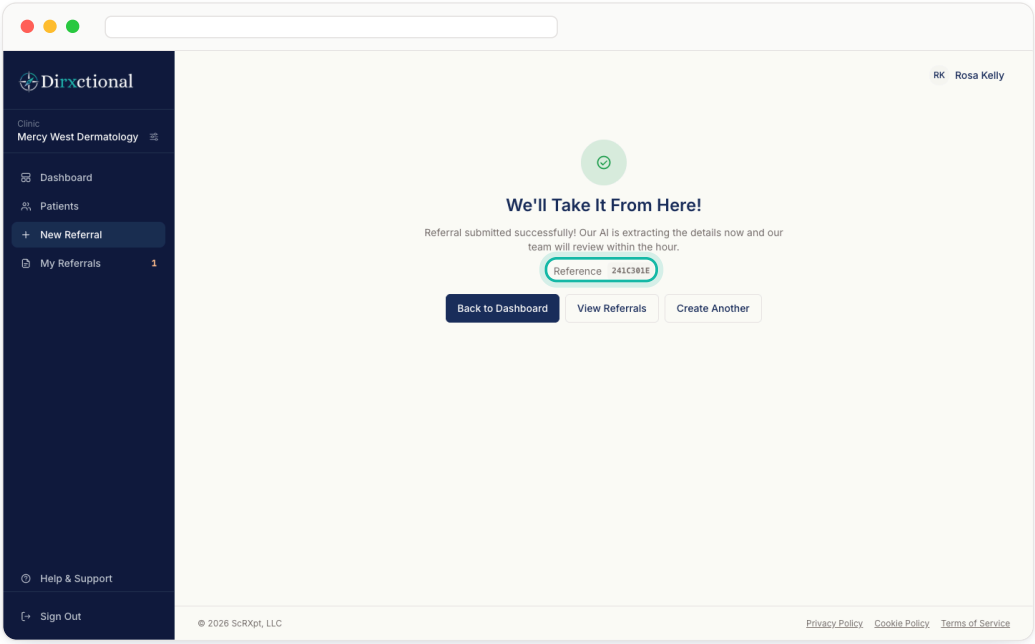

Check the details and the pharmacy, tick the confirmation box, then click **Submit Referral**. Our team takes it from here.

Step 4 of 4 – confirm, then submit.

After you submit: your reference number

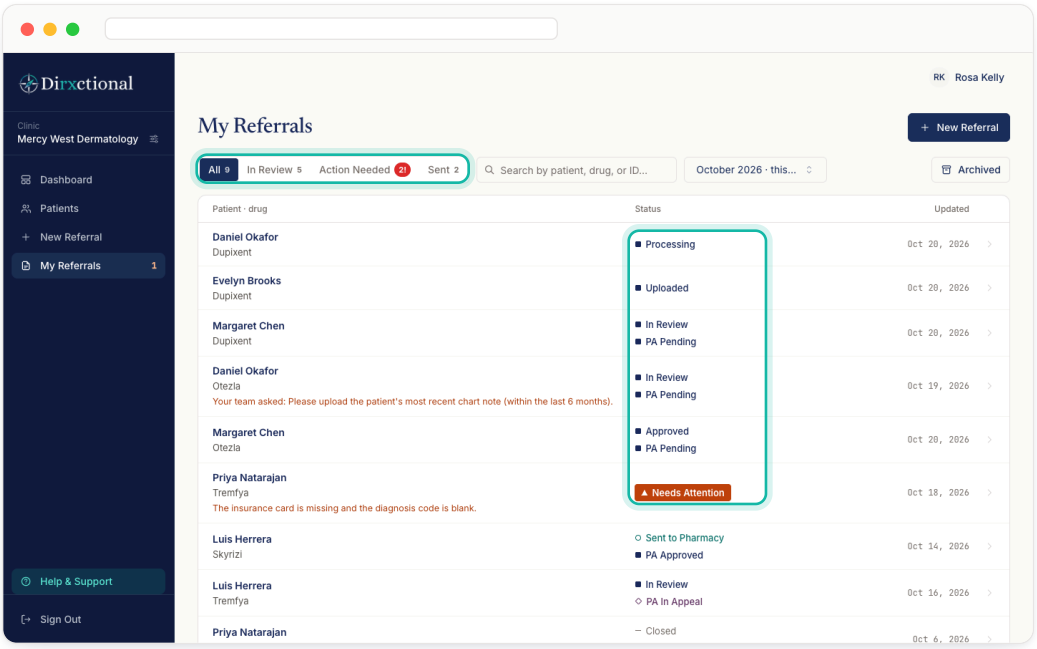

The confirmation screen reads **We'll take it from here.** and shows a **Reference** — the first eight characters of the referral's ID, in capitals (for example `241C301E`). Quote this number whenever you call or write to us about the referral.

The Reference is the number to quote when you contact us.

Tracking progress

Watch your referral under **My Referrals**. Each one shows its status, and its PA status when a prior authorization is involved; the tabs at the top narrow the list to **In Review**, **Action Needed** or **Sent**. See **Section 5** for what each status means, and **1.4** to choose which updates reach you by email.

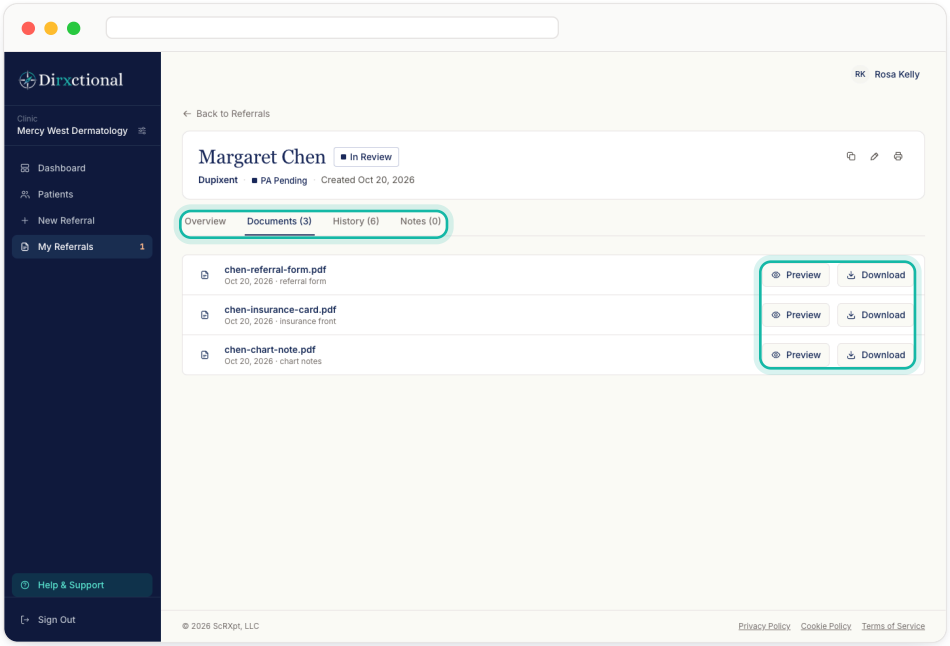

Track every referral and its status in one place.

SECTION 3

Common Questions

3.1 · What's on a referral's page?

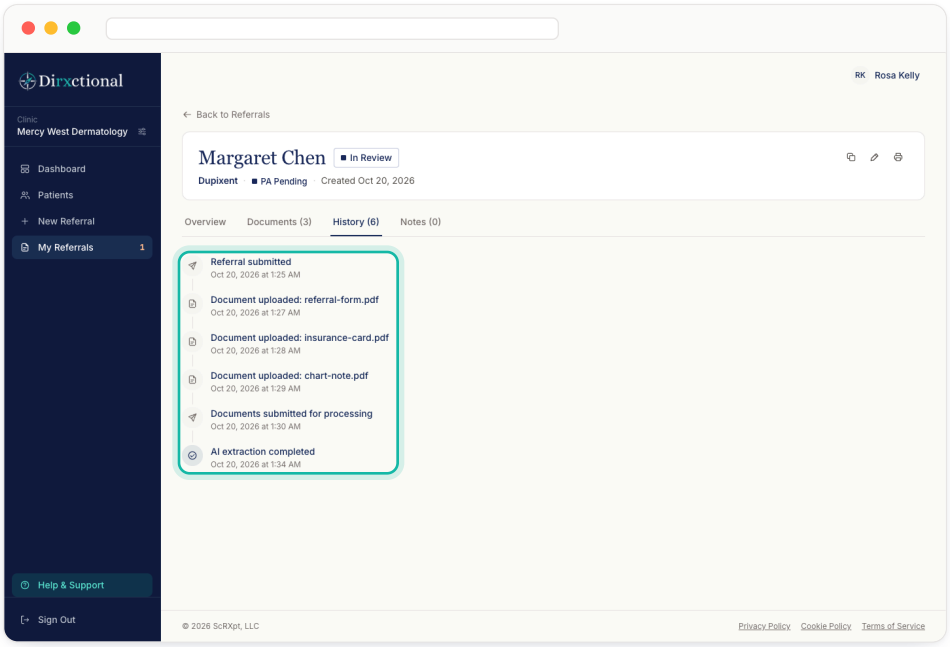

Open any referral from **My Referrals**. Four tabs sit under the header: **Overview**, **Documents**, **History** and **Notes**. Overview holds the patient, insurance and prior authorization details. Documents lists every file on the referral, each with **Preview** and **Download**.

The Documents tab – preview or download any file.

3.2 · How do I see what's happened on a referral?

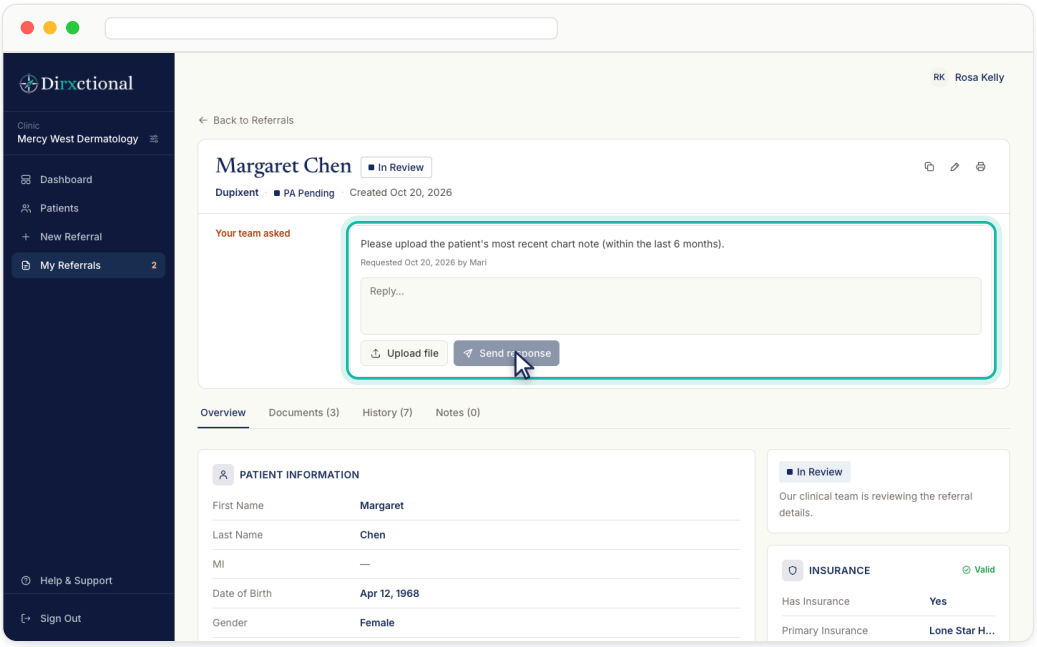

Open the **History** tab. It's the referral's timeline, newest step last: Referral submitted → Document uploaded → Documents submitted for processing → AI extraction completed, and every step after that.

Every step, with the date and time it happened.

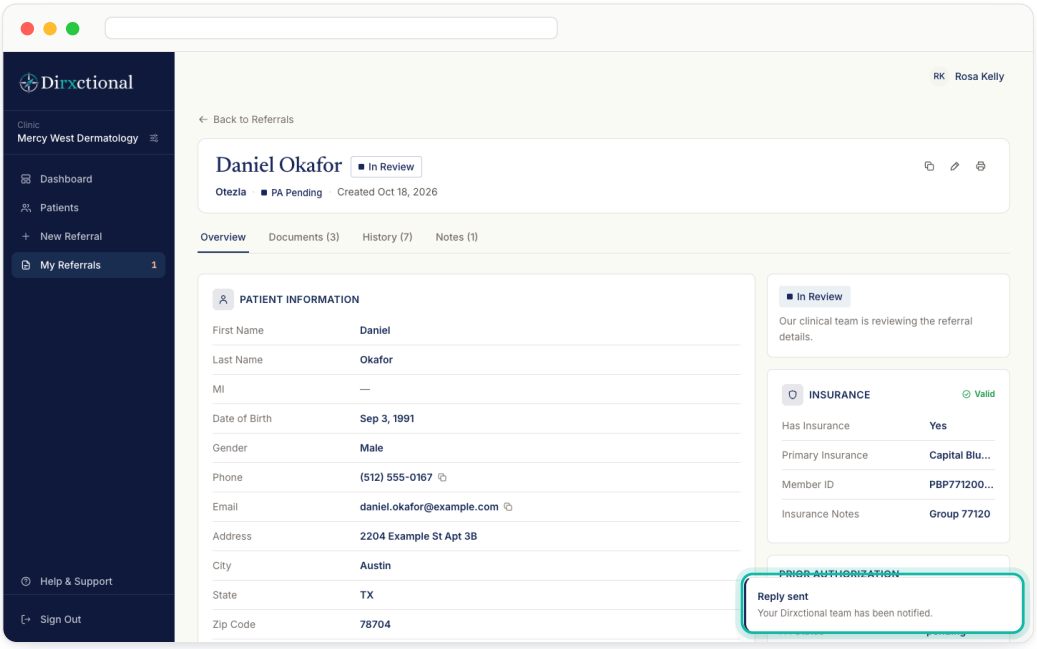

3.3 · Our team asked for something — how do I reply?

When we need something from you, the referral shows an **Action needed** card with our request, and the dashboard counts it under **Needs you**. Type your reply, add a file with **Upload file** if we asked for one, then click **Send response**.

Reply and attach right on the request.

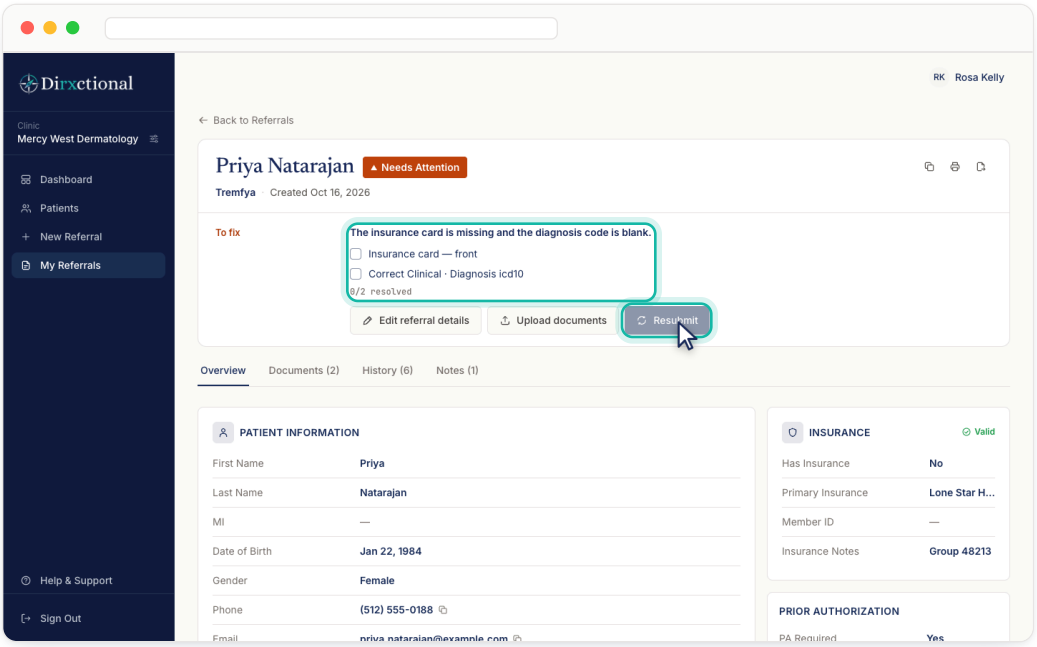

Once it's sent, you'll see **Reply sent** and your Dirxctional team is notified. The referral carries on from there.

Reply sent — we've been notified.

3.4 · A referral says Needs Attention — what now?

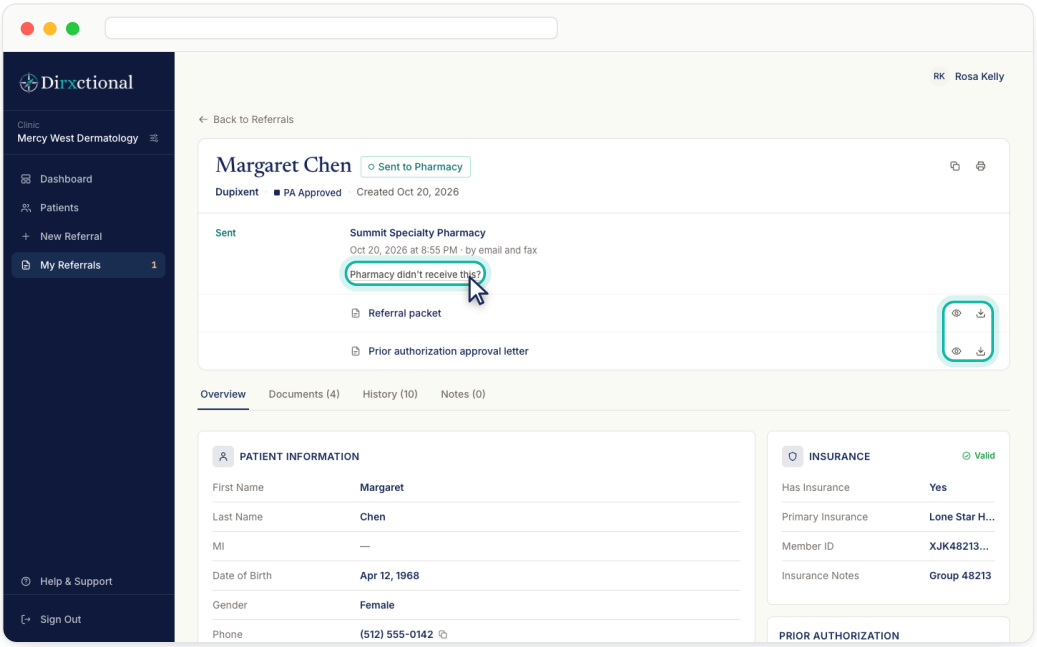

Open it. The **To fix** section spells out what's missing or wrong and lists each item to resolve. Fix them with **Edit referral details** or **Upload documents**, then click **Resubmit**. We'll re-run the prior authorization the same day.

The reason is spelled out — fix it, then resubmit.

3.5 · How do I see what was sent to the pharmacy?

Once a referral is **Sent to Pharmacy**, its header shows a **Sent** card: which pharmacy, when, and how it went (email and fax), plus the files that were sent — the referral packet and, when there is one, the prior authorization approval letter. Preview or download each from the icons on the right. If the pharmacy says it never arrived, click **Pharmacy didn't receive this?** on the same card.

The Sent card — what went, where, and when.

3.6 · How do I know if a Prior Authorization is needed?

Open the referral and look at the **Prior Authorization** card on the Overview tab. It shows whether a PA is required, the current status, and — once approved — the expiry date. You don't submit PAs yourself; the Dirxctional team handles that.

3.7 · How do I add a note?

Open the referral → **Notes** tab → type your message → **Send**. Both you and our team can read and reply, so the whole conversation stays attached to that referral.

3.8 · The patient already has an approved PA – do I still upload PA docs?

No. Just send the enrollment form, chart notes, and insurance card. If the existing PA is still valid, we'll use it.

3.9 · The patient is on a bridge program – anything different?

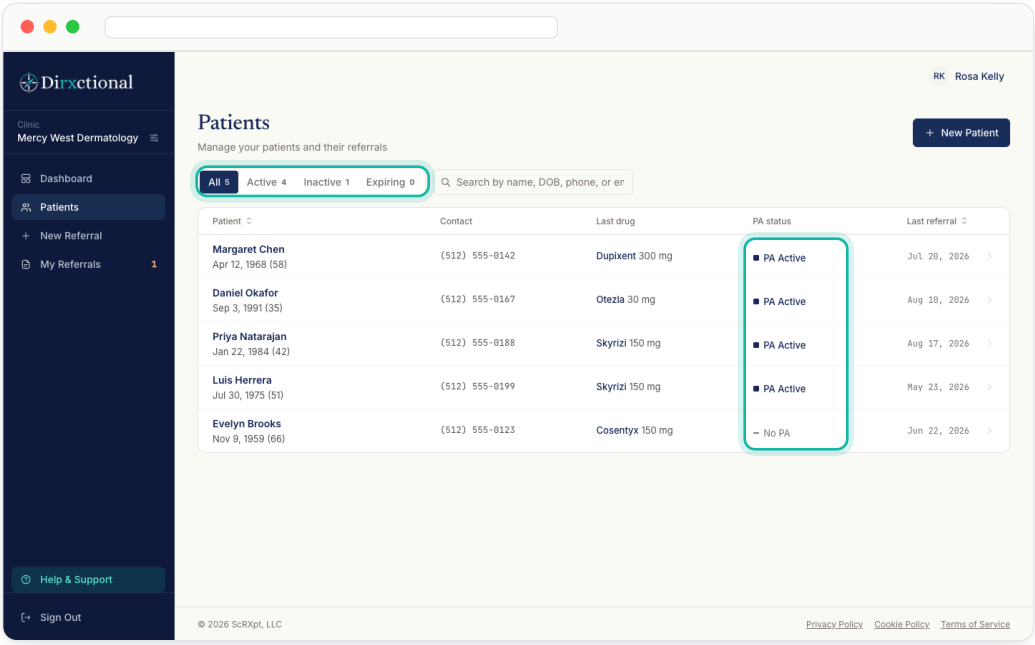

Upload the manufacturer enrollment form as normal, and add a **Note** telling us they're on a bridge — that way we can send before the PA returns.

SECTION 4

Patients & Services

4.1 · Your patient list

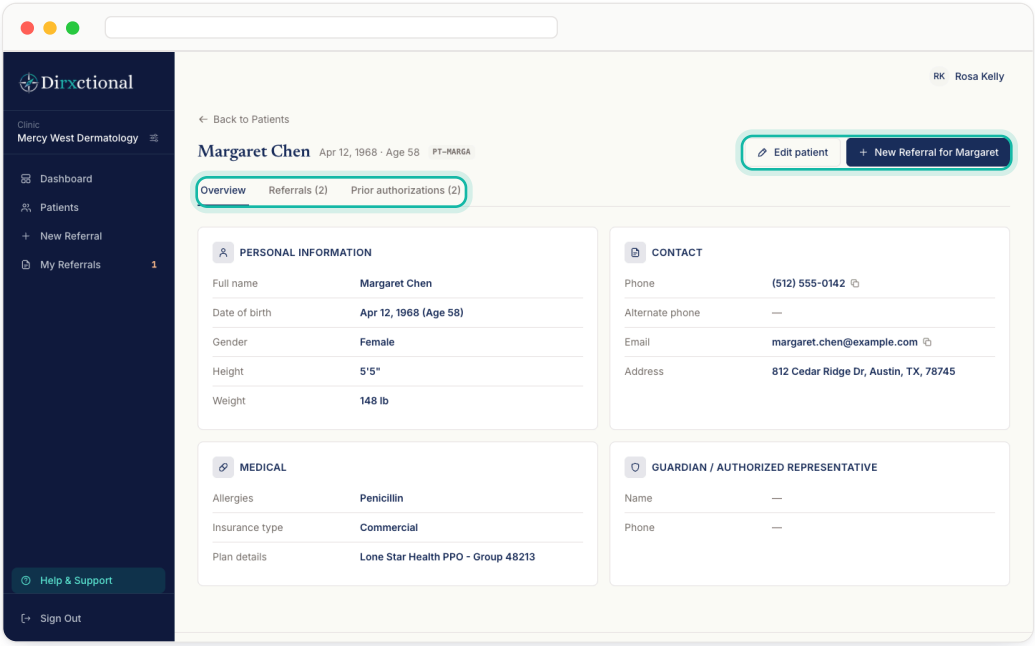

Patients in the sidebar lists everyone your clinic has added, with their phone number, last drug, PA status and last referral date. Filter by **All**, **Active**, **Inactive** or **Expiring**, or search by name, DOB, phone or email.

Every patient, with their latest drug and PA status.

4.2 · A patient's record

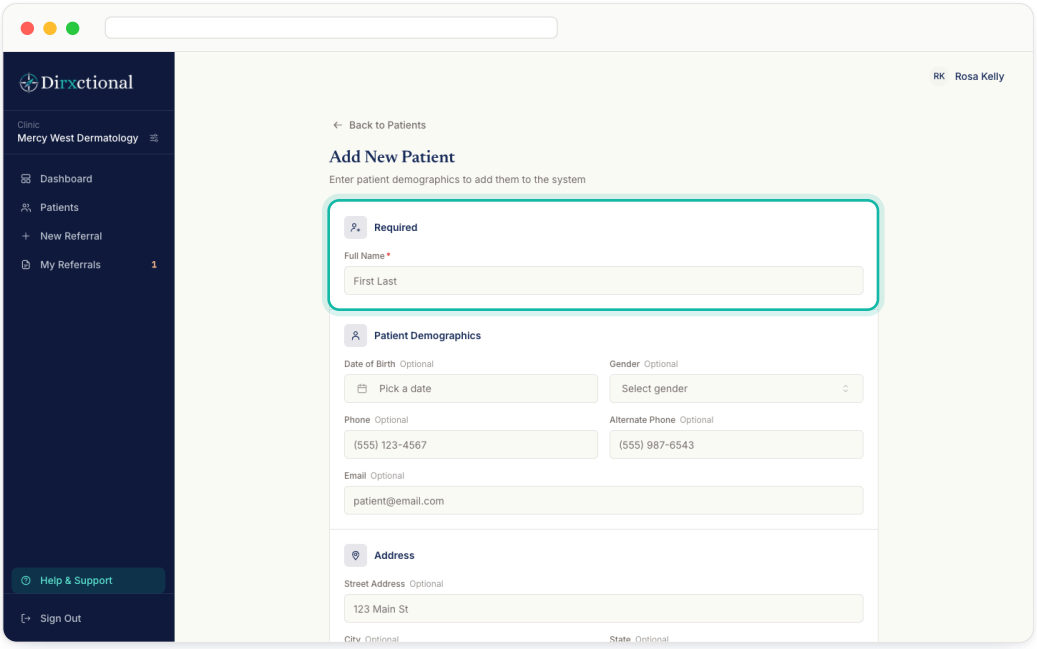

Click a patient to open their record. **Overview** holds personal, contact, medical and guardian details; the **Referrals** and **Prior authorizations** tabs list everything sent for them. Use **Edit patient** to update their details, or **New Referral for** the patient to start the wizard from here.

One record per patient, with their referrals and PAs.

4.3 · Adding a patient without starting a referral

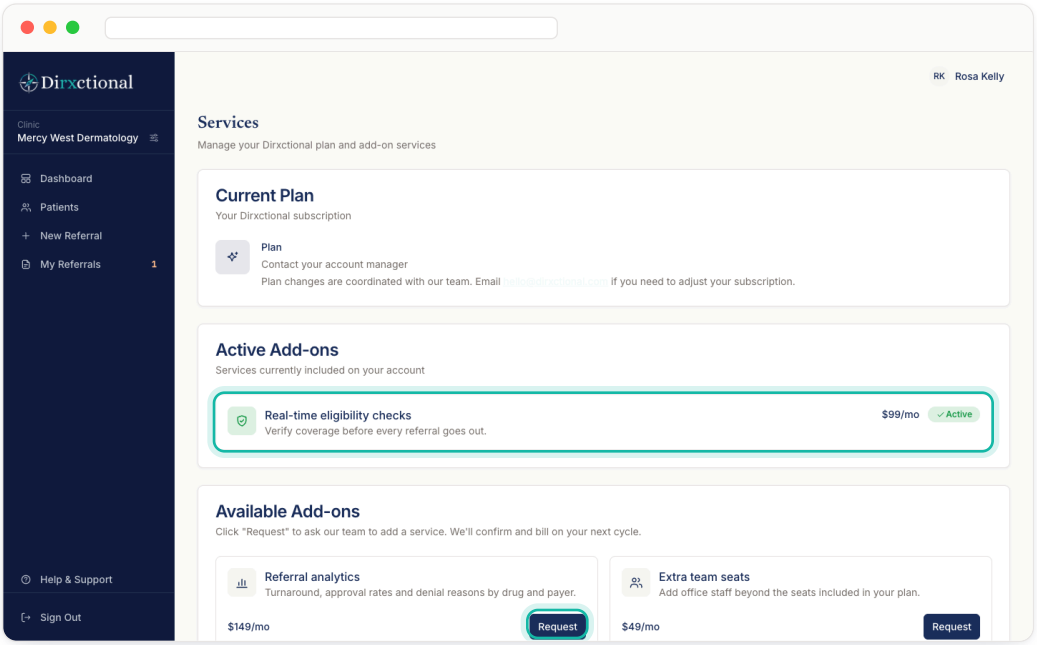

Go to **Patients** → **New Patient**, fill the form, and click **Create Patient**. Only the patient's full name is required — everything else is optional.

Full name is the only required field.

4.4 · Services

The **Services** page shows your current plan, the add-ons already on your account, and the add-ons you can request. Click **Request** on one and our team will confirm it and bill it on your next cycle.

Your plan, active add-ons, and add-ons you can request.

SECTION 5

Understanding Status

Every referral carries a **referral status**, and a **PA status** when a prior authorization is involved. Each status is a small mark plus its name, coloured by who has the referral right now:

▲ Your clinic has it ■ Dirxctional has it ◇ The payer has it ○ The pharmacy has it – Nobody — finished

Only one status asks something of your office: ▲ Needs Attention. It's the only filled badge, so it stands out in any list.

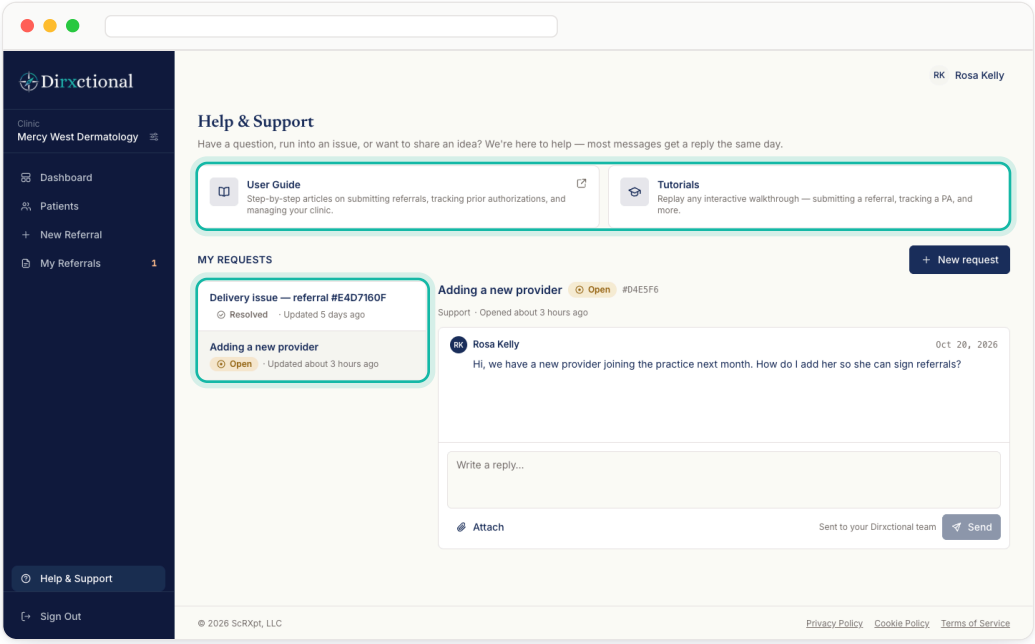

STATUS	WHAT IT MEANS	WHO MOVES IT NEXT
▲ YOUR CLINIC		
▲ Needs Attention	Something is missing or needs correcting. The reason is on the referral.	You — fix it and resubmit (3.4).
■ DIRXCTIONAL		
■ Uploaded	Your documents have arrived.	Dirxctional — the AI starts reading them.
■ Processing	The AI is reading your documents.	Dirxctional — usually 1–2 minutes.
■ In Review	Our clinical team is reviewing the referral details.	Dirxctional.
■ Approved	Ready to send to the pharmacy.	Dirxctional sends it.
■ PA Pending	A prior authorization is needed and not yet with the payer.	Dirxctional.
■ PA In Progress	Our team is preparing the prior authorization.	Dirxctional.
■ PA Approved	Coverage approved.	Dirxctional sends the referral.
■ PA Denied	The payer denied coverage.	Dirxctional — we'll reach out about next steps.
◇ THE PAYER		
◇ PA Submitted	Sent to the insurance payer.	The payer decides.
◇ PA In Appeal	We've appealed a denial.	The payer decides.
◇ PA Level 2	The appeal has gone to a second-level review.	The payer decides.
○ THE PHARMACY		
○ Sent to Pharmacy	The pharmacy has the referral packet.	The pharmacy contacts the patient.
– FINISHED		
– Closed	The referral is finished.	Nobody.
– PA Final	The payer's final decision is in.	Nobody.
– Bridge — PA not required	The patient is covered by a bridge program for now.	Nobody.

SECTION 6

Need Help

Open **Help & Support** in the sidebar. At the top, **User Guide** opens this guide and **Tutorials** replays any walkthrough — including the guided tour from your first sign-in.

My requests lists every question you've sent us, marked **Open** or **Resolved**. Click **New request** to ask something new, or open a request to reply and **Attach** files. Replies come signed by the person helping you — for example, “Mari | Dirxctional Support Team”.

Guides, tutorials, and every request you've sent us.
